

Dear Judge:

We are pleased to share the NCTSN Bench Card for the Trauma Informed Judge—an official product of the National Child Traumatic Stress Network’s Justice Consortium in cooperation with the National Council of Juvenile and Family Court Judges. Designed by judges, lawyers, and behavioral health professionals, this card will assist you in your work with youth who struggle with traumatic stress.

Many court-involved youth have been exposed to traumatic events. They present with problems that require professional assistance to modify their behavior and protect the community. Strong connections have been made between early exposure to trauma and “derailed” child development. Traumatic experiences change the brain in ways that cause youth to think, feel and behave differently.

Trauma impacts many important court decisions, among them:

- temporary placement or custody,
- detention or hospitalization,
- residential or community based treatment,
- treatment and referrals to health and behavioral health services,
- transfers to adult criminal court,
- termination of parental rights and adoption,
- restoration and treatment for child victims,
- visitation with maltreating adults or jail/prison visitation.

For many traumatized children, the judge serves as the crucial professional to direct them to proper treatment. The good news is that, when properly treated through trauma-informed, evidence-based treatment, children can recover.

As a judge, we know you must balance your responsibilities to protect the public and restore victims while also trying to change the destructive life course of a struggling child or an offending teen. Judges know that failure to make such changes can lead to youths who become adults involved in the justice system. Judges often see those adults raise new generations who also appear in court—the outcome of the uninterrupted, intergenerational transmission of traumatic stress.

Enclosed are two bench cards. The first offers a series of questions to help you, as a judge, gather information necessary to make good decisions for children at risk of traumatic stress disorders. The second is a sample addendum designed to be copied or scanned and attached to your orders for behavioral health assessments. It will help mental health professionals develop reports that are trauma informed, admissible into evidence, and informative to you.

We hope that you find the bench cards to be helpful in your work with youth. For additional information and other trauma resources for judges and attorneys, please see <http://www.nctsn.org/resources/topics/juvenile-justice-system>

Should you have questions regarding the information contained in the cards, please contact Dr. James Clark at clark2j9@UCMAIL.UC.EDU or the NCTSN at help@nctsn.org

Sincerely,
The NCTSN Justice Consortium

NCTSN BENCH CARD

FOR THE TRAUMA-INFORMED JUDGE

Research has conclusively demonstrated that court-involved children and adolescents present with extremely high rates of traumatic stress caused by their adverse life experiences. In the court setting, we may perceive these youth as inherently disrespectful, defiant, or antisocial, when, in fact, their disruptive behavior may be better understood in the context of traumatic stress disorders. These two Bench Cards provide judges with useful questions and guidelines to help them make decisions based on the emerging scientific findings in the traumatic stress field. These cards are part of a larger packet of materials about child and adolescent trauma available and downloadable from the [NCTSN Trauma-Informed Juvenile Justice System Resource Site*](#) and are best used with reference to those materials.

- 1. Asking trauma-informed questions can help judges identify children who need or could benefit from trauma-informed services from a mental health professional. A judge can begin by asking, “Have I considered whether or not trauma has played a role in the child’s¹ behavior?” Use the questions listed below to assess whether trauma-informed services are warranted.**

TRAUMA EXPOSURE: Has this child experienced a traumatic event? These are events that involve actual or threatened exposure of the child to death, severe injury, or sexual abuse, and may include domestic violence, community violence, assault, severe bullying or harassment, natural or man-made disasters, such as fires, floods, and explosions, severe accidents, serious or terminal illness, or sudden homelessness.

MULTIPLE OR PROLONGED EXPOSURES: Has the child been exposed to traumatic events on more than one occasion or for a prolonged period? Repeated or prolonged exposure increases the likelihood that the child will be adversely affected.

OUTCOMES OF PREVIOUS SANCTIONS OR INTERVENTIONS: Has a schedule of increasingly restrictive sanctions or higher levels of care proven ineffective in this case? Traumatized children may be operating in “survival mode,” trying to cope by behaving in a defiant or superficially indifferent manner. As a result, they might respond poorly to traditional sanctions, treatments, and placements.

CAREGIVERS’ ROLES: How are the child’s caregivers or other significant people helping this child feel safe or preventing (either intentionally or unintentionally) this child from feeling safe? Has the caregiver been a consistent presence in the child’s life? Does the caregiver acknowledge and protect the child? Are caregivers themselves operating in survival mode due to their own history of exposure to trauma?

SAFETY ISSUES FOR THE CHILD: Where, when and with whom does this child feel safest? Where, when and with whom does he or she feel unsafe and distrustful? Is the home chaotic or dangerous? Does a caregiver in the household have a restraining order against another person? Is school a safe or unsafe place? Is the child being bullied at school or does the child believe that he or she is being bullied?

TRAUMA TRIGGERS IN CURRENT PLACEMENT: Is the child currently in a home, out-of-home placement, school, or institution where the child is being re-exposed to danger or being “triggered” by reminders of traumatic experiences?

UNUSUAL COURTROOM BEHAVIORS: Is this child behaving in a highly anxious or hypervigilant manner that suggests an inability to effectively participate in court proceedings? (Such behaviors include inappropriate smiling or laughter, extreme passivity, quickness to anger, and non-responsiveness to simple questions.) Is there anything I, as a judge, can do to lower anxiety, increase trust, and enhance participation?

- 2. It is crucial to have complete information from all the systems that are working with the child and family. Asking the questions referenced below can help develop a clearer picture of the child's trauma and assess needs for additional information.**

COMPLETENESS OF DATA FOR DECISIONS: Has all the relevant information about this child's history been made available to the court, including child welfare and out-of-jurisdiction or out-of-state juvenile justice information?

INTER-PROFESSIONAL COOPERATION: Who are the professionals who work with this child and family? Are they communicating with each other and working as a team?

UNUSUAL BEHAVIORS IN THE COMMUNITY: Does this child's behavior make sense in light of currently available information about the child's life? Has the child exhibited extreme or paradoxical reactions to previous assistance or sanctions? Could those reactions be the result of trauma?

DEVELOPMENT: Is this child experiencing or suffering from emotional or psychological delays? Does the child need to be assessed developmentally?

PREVIOUS COURT CONTACTS: Has this child been the subject of other court proceedings? (Dependency/Neglect/Abuse; Divorce/Custody; Juvenile Court; Criminal; Other)

OUT-OF-HOME PLACEMENT HISTORY: How many placements has this child experienced? Have previous placements been disrupted? Were the disruptions caused by reactions related to the child's trauma history? How did child welfare and other relevant professionals manage these disruptions?

BEHAVIORAL HEALTH HISTORY: Has this child ever received trauma-informed, evidence-based evaluation and treatment? (Well-intentioned psychiatric, psychological, or substance abuse interventions are sometimes ineffective because they overlook the impact of traumatic stress on youth and families.)

- 3. Am I sufficiently considering trauma as I decide where this child is going to live and with whom?**

PLACEMENT OUTCOMES: How might the various placement options affect this child? Will they help the child feel safe and secure and to successfully recover from traumatic stress or loss?

PLACEMENT RISKS: Is an out-of-home placement or detention truly necessary? Does the benefit outweigh the potential harm of exposing the child to peers who encourage aggression, substance use, and criminal behavior that may possibly lead to further trauma?

PREVENTION: If placement, detention or hospitalization is required, what can be done to ensure that the child's traumatic stress responses will not be "triggered?" (For example, if placed in isolation or physical restraints, the child may be reminded of previous traumatic experiences.)

DISCLOSURE: Are there reasons for not informing caregivers or staff at the proposed placement about the child's trauma history? (Will this enhance care or create stigma and re-victimization?)

TRAUMA-INFORMED APPROACHES: How does the programming at the planned placement employ trauma-informed approaches to monitoring, rehabilitation and treatment? Are staff knowledgeable about recognizing and managing traumatic stress reactions? Are they trained to help children cope with their traumatic reactions?

POSITIVE RELATIONSHIPS: How does the planned placement enable the child to maintain continuous relationships with supportive adults, siblings or peers?

- 4. If you do not have enough information, it may be useful to have a trauma assessment done by a trauma-informed professional. Utilizing the NCTSN BENCH CARD FOR COURT-ORDERED TRAUMA-INFORMED MENTAL HEALTH EVALUATION OF CHILD, you can request information that will assist you in making trauma-informed decisions.**

¹The use of "child" on this bench card refers to any youth who comes under jurisdiction of the juvenile court.

NCTSN BENCH CARD

FOR COURT-ORDERED TRAUMA-INFORMED MENTAL HEALTH EVALUATION OF CHILD: SAMPLE ADDENDUM

This Court has referred this child¹ for mental health assessment. Your report will assist the judge in making important decisions. Please be sure the Court is aware of your professional training and credentials. In addition to your standard psychosocial report, we are seeking trauma-specific information. Please include your opinion regarding the child's current level of danger and risk of harm. The Court is also interested in information about the child's history of prescribed psychiatric medications. We realize that you may be unable to address every issue raised below, but the domains listed below are provided as an evidence-based approach to trauma-informed assessment.

1. SCREENING AND ASSESSMENT OF THE CHILD AND CAREGIVERS

Please describe the interview approaches (structured as well as unstructured) used for the evaluation. Describe the evidence supporting the validity, reliability, and accuracy of these methods for children or adolescents. For screens or tests, please report their validity and reliability, and if they were designed for the population to which this child belongs. If feasible, please report standardized norms.

Discuss any other data that contributed to your picture of this child. Please describe how the perspectives of key adults have been obtained. Are the child's caregivers or other significant adults intentionally or unintentionally preventing this child from feeling safe, worthy of respect, and effective? Are caregivers capable of protecting and fostering the healthy development of the child? Are caregivers operating in "survival mode" (such as interacting with the child in a generally anxious, indifferent, hopeless, or angry way) due to their own history of exposure to trauma? What additional support/resources might help these adults help this child?

2. STRENGTHS, COPING APPROACHES, AND RESILIENCE FACTORS

Please discuss the child's existing strengths and coping approaches that can be reinforced to assist in the recovery or rehabilitation process. Strengths might include perseverance, patience, assertiveness, organization, creativity, and empathy, but coping might take distorted forms. Consider how the child's inherent strengths might have been converted into "survival strategies" that present as non-cooperative or even antisocial behaviors that have brought this child to the attention of the Court.

Please report perspectives voiced by the child, as well as by caregivers and other significant adults, that highlight areas of hope and recovery.

3. DIAGNOSIS (POST TRAUMATIC STRESS DISORDER [PTSD])

Acknowledging that child and adolescent presentations of PTSD symptoms will differ from adult presentations, please "rule-in" or "rule-out" specific DSM-V criteria for PTSD for adolescents and children older than six years, which include the following criteria:

- Exposure to actual or threatened death, serious injury, or sexual violence, either experienced directly, witnessed, or learning that the event occurred to a close family member or friend (Criteria A)
- Presence of intrusion symptoms such as intrusive memories, distressing dreams, flashbacks, physical reactions, trauma-specific re-enactment through play, psychological distress at exposure to cues (Criteria B)
- Avoidance of stimuli or reminders associated with the traumatic event, including avoidance of internal thoughts and feelings related to the event, as well as external activities, places, people, or situations that arouse recollections of the event (Criteria C)

CONTINUED ON BACK →

- Negative changes in cognition, mood, and expectations; diminished interest in, detachment, and estrangement from others; guilt and shame; socially withdrawn behavior; reduction in positive emotions (Criteria D)
- Alterations in arousal and reactivity, including irritable or aggressive behavior, angry outbursts, reckless or self-destructive behavior, hypervigilance, exaggerated startle response, concentration problems, and sleep disturbance (Criteria E)
- Exhibiting these disturbances in behavior, thoughts and mood for over a month (Criteria F)
- Significant distress or impairment in relationships with parents, siblings, peers, or other caregivers or with school behavior (Criteria G)
- The disturbed behavior and mood cannot be attributed to the effects of a medication, street drug, or other medical condition (Criteria H)

PTSD can also be present for children ages six and younger. Criteria include exposure; intrusive symptoms, including distressing memories or play re-enactment and physiological reactions to reminders; avoidance of people, conversations or situations; negative emotional states such as fear, sadness, or confusion, sometimes resulting in constriction of play; irritable behavior and hypervigilance; and impairment in relationships with parents, siblings, peers or other caregivers.

Even if an official DSM-V diagnosis of PTSD is not warranted, traumatic stress reactions can definitely or potentially contribute to the child's behavioral, emotional, interpersonal, or attitudinal problems. Traumatic stress reactions may contribute to problems with aggression, defiance, avoidance, impulsivity, rule-breaking, school failure or truancy, running away, substance abuse, and an inability to trust or maintain cooperative and respectful relationships with peers or adults.

4. TRAUMA-INFORMED SERVICES

Has this child ever received Trauma-Focused, Evidence-Based Treatment?*** Sometimes well-intentioned psychiatric, psychological, social work, or substance abuse evaluations and treatment are incomplete and of limited effectiveness because they do not systematically address the impact of children's traumatic stress reactions.

The Court is interested in potential sources of trauma-informed services in your area and your thoughts about the likelihood that the child can receive those services.

In the meantime, what can be done immediately for and with the family, school, and community to enhance safety, build on the child's strengths, and to provide support and guidance? How can this child best develop alternative coping skills that will help with emotional and behavioral self-regulation?

5. SUGGESTIONS FOR STRUCTURING PROBATION, COMMUNITY SUPERVISION AND/OR PLACEMENT OPTIONS.

Structured case plans for probation, community supervision, and/or placement should consider the ability of the setting and the people involved to assist the child in feeling safe, valued, and respected. This is especially important for traumatized children. Similarly, the plan for returning home, for continuing school and education, and for additional court or probationary monitoring should also clearly address each child's unique concerns about safety, personal effectiveness, self-worth, and respect. Please consider where, when, and with whom this child feels most safe, effective, valued and respected. Where, when, and with whom does the child feel unsafe, ineffective, or not respected? What out-of-home placements are available that can better provide for this child's health and safety, as well as for the community's safety? What placements might encourage success in school, relationships, and personal development?

¹The use of "child" on this bench card refers to any youth who comes under jurisdiction of the juvenile court.

*** Trauma-Focused, Evidence-Based (TF-EB) Treatment is science-based, often requires training in a specific protocol with careful clinical supervision, and emphasizes the treatment relationship, personal/psychological safety, emotional and behavioral self-regulation, development of coping skills, specific treatment of child traumatic experiences, and development of self-enhancing/pro-social thinking, feeling, decision-making, and behaving. TF-EB treatments include: Trauma-Focused Cognitive Behavioral Therapy, Parent-Child Interaction Therapy, Trauma Affect Regulation: Guidelines for Education and Therapy, Child Parent Psychotherapy and more. See website: <http://www.nctsn.org/resources/topics/treatments-that-work/promising-practices>
