

Study of Sentencing Practices in North Carolina
 Superior Court Judges' Conference
 June 23, 2022

1

NC Sentencing and Policy Advisory Commission

About	Duties
<p>Membership</p> <ul style="list-style-type: none"> 28 members representing components of the criminal justice system 	<p>Legislative and other requests</p>
<p>Independent</p> <ul style="list-style-type: none"> Members appointed by leaders of all three branches of government 	<p>Mandates</p> <ul style="list-style-type: none"> Monitor sentences imposed under Structured Sentencing Annual population projections Review criminal justice bills and provide fiscal impact Biennial recidivism reports (adult, juvenile) Evaluate implementation of the Justice Reinvestment Act (JRA)
<p>Purpose</p> <ul style="list-style-type: none"> Advise General Assembly and criminal justice agencies on criminal justice policy 	

2

Presentation Overview

- Background
 - 2002 Sentencing Commission Study on Sentencing Practices
 - Findings from academic literature
 - Findings from similar studies from other states
- Descriptive Statistics: FY 2019 felony conviction data
 - Description of data and limitations
 - Bivariate findings
- Multivariate analysis
 - Definitions and variables
 - Results and findings

3

Background

NC Sentencing and Policy Advisory Commission 4

4

Study Components and Timeframe

- Modeled after 2002 Sentencing Commission study on Sentencing Practices
- Interest from Governor, Superior Court Judges' Equity Committee, Conference of District Attorneys
- Includes literature review, studies from other states, descriptive statistics, multivariate analyses
- Research questions examined
 - What were the sentencing practices for felony convictions in the context of legal and extralegal variables?
 - What can we learn from these data?
 - What needs more examination?

5

5

Key Findings: Academic Literature Review

- No agreed upon definition of sentencing disparity in academic literature
- Most research focuses on a few key decision points:
 - Charge reductions/plea bargains
 - Discretionary sentencing decisions
 - Decision to incarcerate
 - Length of sentence imposed
- Legal factors are strong predictors of sentencing outcomes
- Extralegal factors (i.e., race, sex, and age) are also predictors of sentencing outcomes

NC Sentencing and Policy Advisory Commission 6

6

Key Findings: Studies From Other States

- Southern states published fewer reports than other regions
- Guideline states published more reports than nonguideline states
- Reports have increased (especially in the last decade); certain topics are emerging areas for study (e.g., stops), while others have been more consistently studied over time
- Descriptive statistics and regression analysis were the most common methodologies
- Sentencing was the most frequent topic
- Many studies focused on race and sentencing found some level of disparity

7

Statistical Profile FY 2019 Felony Convictions

8

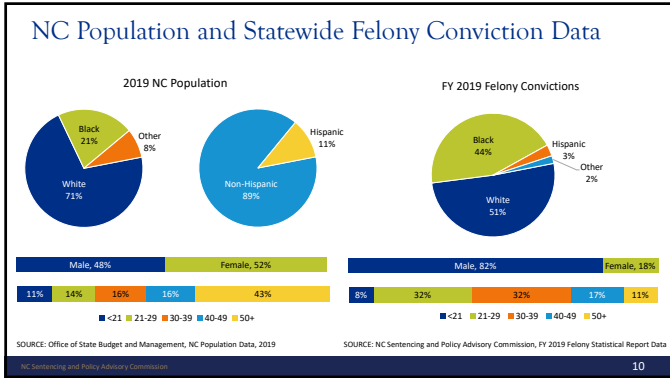

Data Source and Limitations

A *sentencing episode* is identified from court records as the sentence imposed for the most serious conviction on a given day of court.

- Data from Sentencing Commission's annual Statistical Report on convictions and sentences imposed.
- Based on data entered into AOC's management information system by the court clerk following the imposition of the sentence.
- Covers all North Carolina counties.
- Unit of analysis is convictions disposed of in a *sentencing episode* in FY 2019 - referred to as "conviction" for simplicity.
- Bivariate analysis only.

NOTE: The unit of analysis differs from the unit of analysis used in the AOC's Trial Court Caseload Statistics. See [Comparison of Statistical Reports and AOC's Trial Court Caseload Statistics](#) for detail.

9

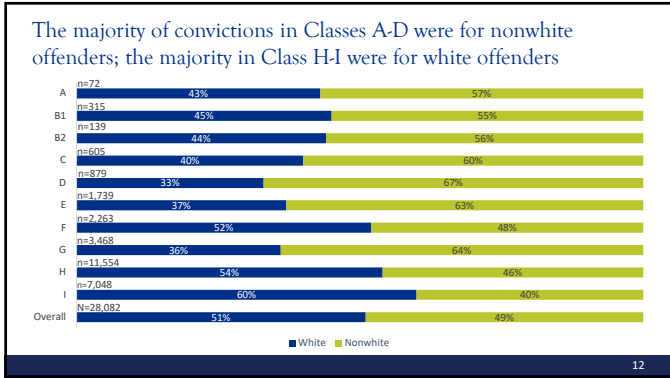

10

In examining FY 2019 felony conviction data, differences by race, sex, and age were found in...

- Distribution of convictions overall
- Distributions by offense class and Prior Record Level (PRL)
- Use of Active punishment
- Charge to conviction (i.e., same class or lower class)

NC Sentencing and Policy Advisory Commission

11

12

Generally, as PRL increased, the percentage of nonwhite offenders increased

13

13

A greater percentage of nonwhite offenders received Active punishment

14

14

Overall, a higher percentage of white offenders had a most serious charge and a most serious conviction of the same offense class

Note: Findings for Classes A - D should be interpreted with caution due to the small number of convictions in those offense classes.

15

15

[Cont'd] Overall, a higher percentage of white offenders had a most serious charge and a most serious conviction of the same offense class

16

16

Females were more frequently convicted in a less serious offense class than they were charged compared to males

Charge		Conviction (%)				Total
		Class A – D	Class E – G	Class H – I	Misdemeanor	
Class A – D	Male	41	37	14	8	4,507
	Female	21	42	22	15	653
Class E – G	Male		63	18	19	7,612
	Female		46	21	33	1,486
Class H – I	Male			53	47	23,396
	Female			45	55	7,831

17

17

A greater proportion of males were sentenced to Active punishment

18

18

Multivariate Analysis

NC Sentencing and Policy Advisory Commission 19

19

Defining the models

Independent Variables

- Legal variables (e.g., class)
- Extralegal variables (e.g., sex)
- Judicial District characteristics (e.g., population density)
 - Judicial Division used as a control for district variation

Dependent Variables

- Points of discretion
- Conviction and sentencing stage only

NC Sentencing and Policy Advisory Commission 20

20

Multivariate Primer

Variable Type	Variable Examples	Interpretation Examples
Categorical	2 Categories Sex (male/female)	Sex Compared to males, the probability of a charge reduction was higher for females
	3+ Categories Prior Record Level	Prior Record Level Compared to offenders in PRL I, the probability of a charge reduction was higher for those in PRL VI
Numeric	Offense Class	Offense Class As the seriousness of offense class increased, the probability of a charge reduction also increased

NC Sentencing and Policy Advisory Commission 21

21

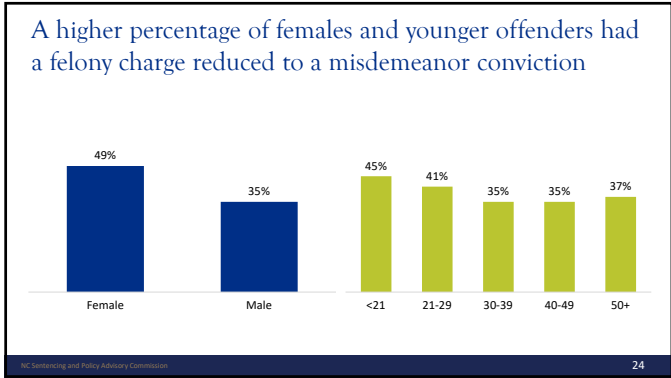

Felony Charge → misdemeanor Conviction

22

22

23

24

Nonwhite offenders were more likely to be convicted of a misdemeanor compared to white offenders

Percent of Felony Charges Resulting in Misdemeanor Convictions by Offense Class

25

Regardless of race category, those with any priors were less likely to be convicted of a misdemeanor

26

Significant predictors of whether a felony charge was reduced to a misdemeanor conviction included...

27

Removing district characteristics from the model changed significance of race; no other variables changed

28

Felony → Less Serious Felony

29

22,887 convictions were included in the model, 29% of which were reduced to less serious felony convictions

30

Younger offenders were more likely to have felony charges reduced to less serious felony convictions; little difference was found by sex

31

Generally, nonwhite offenders were more likely to be convicted in a less serious offense class than the original charge

Percent Convicted of a Less Serious Felony Offense by Offense Class

32

A similar pattern was found when examining PRL

33

Significant predictors of whether a felony charge was reduced to a less serious felony conviction included...

34

Removing district characteristics from the model resulted in no change in significant variables

35

Summary

- Sex, age, method of disposition (i.e., jury trial) had the same effect in both models
- District characteristics were significant in misdemeanor model, non-significant in felony model
 - Removal of district characteristics changed the significance of race from non-significant to significant for misdemeanor model
- As the most serious charge class increased, there was a decreased probability of misdemeanor conviction (misdemeanor model) but an increased probability of a less serious felony conviction (felony model)
- With the exception of PRL VI, PRL was not significant in felony model
