68 Miles of Unpaved Road
69 Percent of Occupied Houses without Access to a Vehicle
70 Percent of Alcohol Impaired Driving Deaths

## 71 Public Safety

72 Violent Crime Rate
73 Property Crime Rate
74 Juvenile Arrests
75 County Jail Average Daily Population

## 76 Demographics

77 Percent of Total Population - Civilian Veterans
78 Age-Group Distribution across NC Counties
79 Population Rankings: 1970, 2016, 2035

## AckNOWLEDGMENTS

"2016 NC Counties: Between the Lines" is a publication of the North Carolina Association of County Commissioners' Center for County Research, following the trend of previous "Map Books" and last year's "County Snapshots." Most of the data come from federal, state, and local sources, and each map includes a citation with the applicable reference.

The Center for County Research thanks the organizations and sources that helped with the data collection process including the N.C. Dept. of Public Instruction, N.C. Community College System, N.C. Dept. of Health and Human Services, Local Government Division in the N.C. Dept. of Revenue, N.C. Dept. of Commerce, Economic Development Partnership of North Carolina, N.C. Dept. of Agriculture, N.C. Dept. of Environmental Quality, N.C. State Board of Elections, N.C. Dept. of Transportation, N.C. Dept. of Public Safety, and the Local Government Commission in the Office of the State Treasurer.

This publication is intended for educational and research purposes. Reproduction for commercial purposes without the written permission of the NCACC is prohibited.

## INTRODUCTION

The North Carolina Association of County Commissioners is pleased to share this year's county data maps. "2016 NC Counties: Between the Lines" compiles 60 maps and follows in the trend of the "2015 County Snapshots" publication to highlight demographic, economic, and educational figures from North Carolina's 100 counties.
"Between the Lines" is divided into ten sections: Education, Economic Development, Health Services, Human Services, Environment, Government, Residency/Property, Transportation, Public Safety, and Demographics. These categories and the associated indicators were selected based on research at the county level, timely policy discussions, and communications and recommendations from county representatives. We hope these data will be informative and will help county officials make data-driven decisions.

Each map includes a legend and a brief description of the data point, where applicable. The collection of maps is prefaced by an overview noting overall trends and highlights gleaned from the findings. These maps and additional data indicators will also be posted on the NCACC website at www.ncacc.org.

## The Many Layers of North Carolina

North Carolina has always been known for our geographic diversity with pristine beaches to open farmland, from urban areas with more than one million residents to towering mountains. However, this diversity is secondary to the social and economic diversity of the Old North State. In "Between the Lines" we explore North Carolina's many unique facets, presenting our work through 60 maps, organized into 10 distinct categories. Because many trends and "ah ha" moments can be found when the maps are considered in their totality, we are also providing the summary below. It is our hope that these visuals, along with the associated analysis, will help policy makers statewide make the best and most well-informed choices possible as they relate to the current and future work of North Carolina's 100 counties.

## Migration Due to Shifting Economics and Personal Preferences

## Taking the Long View

We begin this analysis by looking at long-term population trends within the 100 counties. We explore the overarching population shifts from 1970 to what is expected by 2035. By focusing on these long term population shifts and high level demographics, we hope to lay the appropriate groundwork and context to look at the economic, educational, social and physical demographics of our state, with an eye toward being 100 counties strong.
As we noted last year in our "Snapshots" publication, North Carolina's largest two counties continue to hold dominant positions in terms of population. Mecklenburg County was home to the largest portion of the state's population in 1970, and is expected to retain that position through 2035. Wake, Guilford, Forsyth, Cumberland, and Buncombe counties are also expected to retain their relative positions through 2035. Durham is similarly situated, but is the only county in the large urban group expected to move up substantially in the population rankings by 2035. Much of this urban growth is from immigration from other states and other countries.

North Carolina's urban centers are not the only areas seeing population growth. Based on historic and expected population growth, many areas expected to see the greatest proportion increases in population are on the coast, or in some cases, in the western mountains. For example, Brunswick County will see the largest movement in its population ranking, from 62nd to 25th between 1970 and 2016. By 2035, it is expected to be the 17th most populous county in the state. Similarly, Pender, Dare and Currituck are expected to move up 38 (Pender) and 27 (Dare and Currituck) positions. These are the largest positive population increases expected in the state. Some regions of the mountains will also see substantial population growth. Macon, Watauga, and Henderson moved up the rankings significantly over the past four decades, and are expected to climb even further by 2035. According to Rebecca Tippett at Carolina Demography (UNC-Chapel Hill), the 65+ population accounts for a large portion of our state's growth, with $15 \%$ of our population aged 65 or older in 2015. We know that, historically, seniors tend to be drawn to the coast and mountains so the expected long term impact to our population makes sense.
However, the mountain and coastal growth trends are not pervasive. McDowell, Surry and Wilkes counties are all expected to fall at least six positions in the population rankings by 2035. Haywood, Mitchell and Ashe are also expected to drop, although not a great deal. The associated foothill communities, for the most part, are expected to stay at about the same ranking level, or move slightly. In addition, several other coastal communities are not expected to see the growth levels mentioned above.

## The Many Layers of North Carolina

#### Abstract

A small group of counties moved up in the population rankings, primarily due to their proximity to some of the urban growth centers. Union County has seen the greatest movement, going from 31st in population to eighth, a position they are expected to hold through 2035. Chatham and Franklin counties have moved up 16 and 14 positions respectively, while Harnett and Johnston moved up 12 and 11 positions since 1970. All are expected to see continued population expansion through 2035. These are not the only counties projected to experience unusually robust population growth. Hoke County has moved from 76 th to 54 th, and is on track to move to 38th by 2035. Lincoln County has moved from 49th to 35th, and is expected to rank 31st in population in 2035. Much of Hoke County's growth is credited to Ft. Bragg. While both of these counties are near major urban centers, they are well outperforming their neighboring ring counties.

While there are exceptions, the counties losing the most population, proportionally, can be found in either the inland east, or the southeastern crescent around Richmond, Scotland, and Robeson counties. This is a continuation of a trend that started more than four decades ago and is expected to continue unless significant changes occur. Given these population trends and several other things that become apparent from the included maps and tables, we want to draw your attention to a few key takeaways that could be of assistance in formulating your policy decisions.

## Commuting is Very Real in North Carolina... and so are Transportation Challenges

While we traditionally think of commuting as an urban phenomenon, in North Carolina that is not always the case. According to the US Census Bureau, in 18 counties, more than half of the population leaves the county to work. Much of this movement is from suburban counties into our urban hubs. The strongest example of this is the ring surrounding Wake County. In this area, five of the seven counties bordering Wake County see out-of-county commuting rates of $53 \%$ or more. The average commuting rate for all seven surrounding counties is $49.3 \%$. While we do not know for sure, it is likely this movement is into Wake or Durham counties for work. However, once you leave the Raleigh-Durham area, the relationship becomes a little less strong. For the five counties surrounding Mecklenburg,
 the average out-of-county commuter rate is $43.3 \%$. The average percent of the working population that drives out of the county to work in the area around Buncombe is $31.6 \%$. Commuting patterns around Cumberland are more variable, with more than $68 \%$ commuting out of their home county of Hoke, but only $25.2 \%$ commuting out of Robeson. However, some of the highest out-of-county commuting rates are far from the urban centers. For example, fully $70.7 \%$ of Jones County workers commute to a job outside their home county. Davidson, Davie, Yadkin, Alexander, Lincoln, Greene, Chowan, Warren, Caswell, and Stokes counties all have out-of-county commuting rates of more than $50 \%$. On the other hand, we have six very rural counties where more than $6 \%$ of the occupied houses in the county do not have access to a vehicle. Six counties have more than 100 miles of unpaved road, which can also complicate transportation.

The policy implications of these patterns are varied. Road development plays a critical role in the future of many of North Carolina's counties. But that is not the end of the story. Working outside the county makes it challenging for parents to play an active role in their children's school, so educators may have to employ some creativity to enhance parental involvement. Communities with large numbers of citizens without regular access to a vehicle may need to think differently about how they deliver social services, health care and other supports. It is not surprising that those without regular access to a vehicle, particularly those in non-urban areas, struggle more than most to find employment.

## Economic Growth and Income

## Challenges and Opportunities Abound

On average North Carolina has experienced positive economic growth, similar to the nation as a whole during the past year. According to the Bureau of Economic Analysis (BEA), North Carolina experienced 1\% growth in the first quarter of 2016. This follows on previous growth rates of 0.9\% (1st quarter 2015), 1.4\% (2nd quarter 2015), 1.2\% (3rd quarter 2015), and 1.3\% (4th quarter 2015). Taken together that places us 25th in growth during the last year.

More significantly, 92 counties have seen positive economic growth since the great recession in 2009. Statewide the average weekly wage has increased by $5.5 \%$ since 2014.
While things are improving, concerns remain. According to the NC Department of Commerce, only three North Carolina counties (Durham, Mecklenburg and Orange) have an average weekly wage that exceeds the national average, and one of those by only $\$ 12$ a week.
Poverty also continues to be a significant issue. Fully $24 \%$ of our state's children are considered to be living in poverty. More than $11 \%$ of our seniors are also living in poverty. Both of these numbers are above the national average.
While this is a statewide issue, with no county with senior and childhood poverty below $4.6 \%$ and $13.4 \%$ respectively, some areas are more challenged. In both cases the numbers are highest in the upper coastal plain near the Virginia border and the Lumber River area near the South Carolina line. These counties, plus some additional areas in the eastern interior, are also the places with the highest proportion of the population living with food insecurity.
With infrastructure investment, these counties could become more economically competitive. For example, these same counties generally have less access to broadband, and have some of the lowest numbers of available economic development sites. Educational investment and continuing the focus on educational attainment could also make a significant impact. This will be challenging, however, as many of these counties have limited local property tax value.

## The Many Layers of North Carolina

## Educational Investment

## Continuing County Commitment

In the most recent fiscal year, North Carolina county governments invested, on average, $35 \%$ of their General Fund budget on education. Counties allocated $\$ 2.7$ billion in school operations, and another $\$ 1.5$ billion on capital and debt service. As the graph below shows, this reflects a continuing and expanding commitment to local schools by county officials.
Despite this investment, North Carolina local school officials have identified nearly $\$ 8.1$ billion in outstanding school construction needs. Statewide that totals to 118 new schools with 50 of those "needed immediately." In addition, it includes $\$ 3.1$ billion in renovation needs. Interestingly self-reported needs are scattered across the state with some of the largest needs in the coastal plain.

On the operations side, Dare County boasts the largest local per student contribution of $\$ 4,366$. Chatham, Durham, Orange, and Transylvania all invest more than $\$ 3,000$ per student. Robeson, Jackson, and Halifax are the greatest financial beneficiaries of the Low-Wealth School state allotments.
The highest high school graduation rates are found in Hyde, Dare, Union, Cherokee and Yancey. Hyde County had the lowest dropout rate in the state at less than $1 \%$.
The presence of charter schools varies significantly from county to county. Mecklenburg County has 25 charter schools, the largest number in the state, followed closely by Durham with 19 charters. Several counties have no charter schools within the county. Substantial variance also exists with the proportion of the school age county population that attends a charter school. Thirty-eight percent of school age children in Northampton County attend a charter. By contrast, 40 counties did not have a single student recorded as attending a charter school.

## A Word about Agriculture

In 2014, according to the NC Department of Agriculture and Consumer Services, North Carolina farm cash receipts totaled $\$ 13.1$ billion. Of this $67.4 \%$ was generated from livestock while the remaining $32.6 \%$ came from crops. This makes North Carolina the 8th largest farming state in the country, 7th in livestock production. As usual, Duplin and Sampson counties dominate the market with each county generating more than $\$ 1.0$ billion in farm cash receipts.

Note: Poverty is defined as everyone in the family living below the poverty threshold determined for the state. In North Carolina the poverty threshold is set at $\$ 23,283$ or less annual income for a family of four, and $\$ 11,945$ or less annual income for an individual. The statewide percent of children in poverty is $24 \%$.

## Percent of Population 65 and Older Living in Poverty, 2014

Note: Poverty for this age group is defined as an annual income of $\$ 11,367$ or less for an individual over 65 , and $\$ 14,326$ or less for two individuals under the age of 65 living together. The statewide average is $11.6 \%$.

## \% Population 65 and over living in Poverty

4.6\% - 7.1\%
7.2\% - $9.7 \%$
9.8\% - 12.9\%
$13 \%-16.6 \%$
16.7\% - 27.2\%

## Environment

## Percent of 2015 Total Population Living in a FEMA Defined High Flood Risk Area

| Percent of Total Population |  |
| :--- | :--- |
| $\square$ | $0.06 \%-0.32 \%$ |
| $\square$ | $0.33 \%-0.69 \%$ |
| $\square$ | $0.7 \%-1.38 \%$ |
|  | $1.39 \%-2.15 \%$ |
| $\square$ | 2.16\% - 3.52\% |
| $\square$ | FEMA High Risk Area (Blue Lines) |

Source: Federal Emergency Management Agency; U.S. Census Bureau 2015 Population Estimate

Note: High Flood Risk Area, a.k.a. Special Flood Hazard Area (SFHA), is defined by FEMA as an area that has a $1 \%$ chance of being inundated by a flood event that equals or meets the base-line flood for that area (base-line $=100$ year flood event). The values are calculated assuming the population is equally distributed across the county.

## Percent of Total Population with Below Standard Water Quality

Note: Below Standard Water Quality is defined as the annual average percent of the population served by community water systems who receive drinking water that does not meet all applicable health-based drinking water standards (Robert Wood Johnson Foundation Program). These values are reported to the state and counties by the EPA.
Source: 2016 County Health Rankings, University of Wisconsin Population Health Institute, Environmental Protection Agency

## Average Daily Concentration of Particulate Matter (<2.5) Air Pollution

## Average Daily Air Pollution by PM 2.5 *Values >12 are considered dangerous for sensitive groups

11.37-11.76
11.77-12.11
12.12-12.54
12.55-12.98
12.99-13.43

Source: 2016 County Health Rankings, University of Wisconsin Population Health Institute; Environmental Protection Agency

Note: Particulate Matter (<2.5) is an air pollutant that is smaller than 2.5 micrometers in diameter. These particles can be directly emitted from sources such as forest fires, or can form when gases emitted from power plants, industries and automobiles react to each other in the air. These particles can cause a decrease in lung function, chronic bronchitis, asthma, and other adverse pulmonary issues (Robert Wood Johnson Foundation Program). The North Carolina average is 12.3.

Note: Hazardous Waste Sites are defined as sites within North Carolina that are regulated by the hazardous waste portions of the Resource Conservation and Recovery Act (RCRA) (NCDEQ).

## Amount of Waste Produced Per Capita, 2014

| $\square$ | $166-1,036$ |
| :--- | :--- |
| $\square$ | $1,037-1,564$ |
| $\square$ | $1,565-2,032$ |
| $\square$ | $2,033-2,836$ |
| $\square$ | $2,837-4,110$ |

Source: NC Department of Environmental Quality —Solid Waste Management Annual per Capita Report, 2014-2015

Note: Waste is defined as "everyday trash," any garbage disposed of in a dumpster, and any construction/demolition materials (i.e. carpet, concrete, wood, etc.) disposed of. This number represents the amount of waste produced per person in pounds between 2014 and 2015. This number does not include Industrial or Animal Waste.

## Pounds of Recycling Per Capita, 2013

Note: Recyclable Materials include scrap metal, aluminum cans, tin cans, aluminum signs, office paper, and cardboard.

## Government

## Percent Registered Voter Turnout, 2012 General Election

$\square$
$\square$
$52.83 \%-59.68 \%$
$\square$
$59.69 \%-65.41 \%$

Source: NC State Board of Elections

Note: Percent Registered Voter Turnout is the percent of the total population of 18 and over that is registered to vote, and that voted during the 2012 General Election (these numbers include early voters). Statewide voter turnout was $68.42 \%$.

## Number of County Employees, 2015-2016

Number of County Employees

Source: As self-reported by each county for the NCACC Budget and Tax Survey, 2015-2016

Note: County Employee: for purposes of the Budget and Tax survey, included any employee in the Register of Deeds, Administration, Board of Elections, Public Works, Health and Human Services, or the Sheriff's offices.

## Percent of County Land Considered a Federal , Military,

## or Nature Reserve (as of March 2016)

0\% - 5.7\%
$5.8 \%-17.2 \%$
$17.3 \%-35.7 \%$
35.8\% - 66.4\%
66.5\% - 100\%

Source: United States Geological Survey

Note: Federal Reserve Area: is an area that is reserved for mining of different minerals, or use of particular watersheds. Military Reserve Area: is an area that is owned and operated by a branch of the U.S. Military, including bases and training grounds not located on base (i.e. Fort Bragg Army Base, Camp Lejeune Marine Base). Nature Reserve Area: is an area that is meant to protect wildlife, plant life, fragile ecosystems, or Natural Parks (i.e. Great Smoky Mountains National Park, Cape Lookout National Seashore).

## Residency/Property

## Percent of Total Population -

## Foreign Born and Non-U.S. Citizens
